To Whom It May Concern,

I am pleased to write this Internship-cum-Recommendation Letter for Ms. Girisha Malni N, who worked under my supervision as a Research Intern from May 2025 to July 2025. During this period, she was actively involved in advanced interdisciplinary research spanning multimodal AI systems, retrieval-augmented generation (RAG), and quantum-inspired computational architectures.

Ms. Girisha Malni N made significant intellectual and technical contributions to the research work titled “Enhanced Multimodal RAG for ESG Report Analysis,” which was published and presented at *the 3rd IEEE International Conference on Foundation and Large Language Models (FLLM)* in November 2025. Her work demonstrated a strong command over multimodal embeddings, document intelligence, domain-specific retrieval pipelines, and Mixture-of-Experts architectures, applied to complex ESG datasets. She showed excellent ability to translate theoretical concepts into scalable, working research prototypes.

She also contributed substantively to exploratory work on “Fully Quantum Feedback Architecture with Topological Encoding and Autonomous Error Correction” and “Quantum NLP with Cirq: Advanced Transformer Embedding.” In these projects, Ms. Girisha demonstrated strong proficiency—impressive for a student researcher—in quantum information theory, stabilizer codes, error-correction mechanisms, and quantum-native NLP embeddings, using tools such as *Qiskit* and *Cirq*. Her analytical depth and willingness to engage with mathematically rigorous concepts were highly impressive.

Ms. Girisha Malni N is a deeply committed researcher who goes beyond implementation to question assumptions, refine methods, and pursue innovative directions. She works independently, documents her work with rigor, and communicates complex ideas clearly. Her ability to integrate AI, sustainability, and quantum computing demonstrates excellent interdisciplinary strength vital for modern R&D.

I strongly recommend Ms. Girisha Malni N for an internship, research, or advanced academic opportunity that demands high technical competence, originality, and research excellence. I am confident she will be a valuable asset to any organization or research group she joins.

Please feel free to contact me should you require any additional information.

Sincerely,

Chung-Horng Lung
